Preface .....	vii
<b>1. The Basics .....</b>	<b>1</b>
1.1 Graphs* .....	2
1.2 The degree of a vertex* .....	5
1.3 Paths and cycles* .....	6
1.4 Connectivity* .....	10
1.5 Trees and forests* .....	13
1.6 Bipartite graphs* .....	17
1.7 Contraction and minors* .....	18
1.8 Euler tours* .....	21
1.9 Some linear algebra .....	23
1.10 Other notions of graphs .....	27
Exercises .....	29
Notes .....	34
<b>2. Matching, Covering and Packing .....</b>	<b>37</b>
2.1 Matching in bipartite graphs* .....	38
2.2 Matching in general graphs <sup>(*)</sup> .....	43
2.3 The Erdős-Pósa theorem .....	47
2.4 Tree packing and arboricity .....	50
2.5 Path covers .....	54
Exercises .....	56
Notes .....	59

---

\* Sections marked by an asterisk are recommended for a first course.  
Of sections marked <sup>(\*)</sup>, the beginning is recommended for a first course.

3. Connectivity .....	63
3.1 2-Connected graphs and subgraphs* .....	63
3.2 The structure of 3-connected graphs <sup>(*)</sup> .....	66
3.3 Menger's theorem* .....	71
3.4 <i>A</i> -paths and Mader's theorem .....	76
3.5 Linking pairs of vertices <sup>(*)</sup> .....	79
Exercises .....	87
Notes .....	90
4. Planar Graphs .....	93
4.1 Topological prerequisites* .....	94
4.2 Plane graphs* .....	96
4.3 Drawings .....	102
4.4 Planar graphs: Kuratowski's theorem* .....	106
4.5 Algebraic planarity criteria .....	111
4.6 Plane duality .....	114
Exercises .....	117
Notes .....	121
5. Colouring .....	123
5.1 Colouring maps and planar graphs* .....	124
5.2 Colouring vertices* .....	126
5.3 Colouring edges* .....	131
5.4 List colouring .....	134
5.5 Perfect graphs .....	139
5.6 $\chi$ -bounded graph properties .....	146
Exercises .....	148
Notes .....	152
6. Flows .....	155
6.1 Circulations <sup>(*)</sup> .....	156
6.2 Flows in networks* .....	158
6.3 Group-valued flows .....	161
6.4 $k$ -Flows for small $k$ .....	165
6.5 Flow-colouring duality .....	167
6.6 Tutte's flow conjecture .....	171
Exercises .....	174
Notes .....	176

7. Extremal Graph Theory .....	179
7.1 Subgraphs* .....	180
7.2 Minors <sup>(*)</sup> .....	185
7.3 Hadwiger's conjecture* .....	189
7.4 Szemerédi's regularity lemma .....	192
7.5 Applying the regularity lemma .....	200
7.6 Two regularity tools .....	206
7.7 Szemerédi's theorem .....	216
Exercises .....	219
Notes .....	223
8. Infinite Graphs .....	227
8.1 Basic notions, facts and techniques* .....	228
8.2 Paths, trees, and ends <sup>(*)</sup> .....	237
8.3 Homogeneous and universal graphs* .....	246
8.4 Connectivity and matching .....	249
8.5 Recursive structures .....	260
8.6 Graphs with ends: the complete picture .....	263
8.7 The topological cycle space .....	272
8.8 Infinite graphs as limits of finite ones .....	277
Exercises .....	280
Notes .....	293
9. Ramsey Theory for Graphs .....	303
9.1 Ramsey's original theorems* .....	304
9.2 Ramsey numbers <sup>(*)</sup> .....	307
9.3 Induced Ramsey theorems .....	310
9.4 Ramsey properties and connectivity <sup>(*)</sup> .....	316
Exercises .....	319
Notes .....	320
10. Hamilton Cycles .....	323
10.1 Sufficient conditions* .....	323
10.2 Hamilton cycles and degree sequences .....	327
10.3 Hamilton cycles in the square of a graph .....	330
Exercises .....	335
Notes .....	336

11. Random Graphs .....	339
11.1 The notion of a random graph* .....	340
11.2 The probabilistic method* .....	345
11.3 Properties of almost all graphs* .....	348
11.4 Threshold functions and second moments .....	351
Exercises .....	358
Notes .....	360
12. Graph Minors .....	363
12.1 Well-quasi-ordering <sup>(*)</sup> .....	364
12.2 The graph minor theorem for trees .....	365
12.3 Tree-decompositions <sup>(*)</sup> .....	367
12.4 Tree-width <sup>(*)</sup> .....	371
12.5 Tangles .....	376
12.6 Tree-decompositions and forbidden minors .....	391
12.7 The graph minor theorem <sup>(*)</sup> .....	396
Exercises .....	405
Notes .....	412
A. Infinite sets .....	417
B. Surfaces .....	423
Hints for all the exercises.....	431
Index .....	433
Symbol index .....	451
